

NatureServe Explorer

A Field Guide of Life

NatureServe Explorer is the definitive source for information on rare and endangered species and ecosystems in the Americas. This field guide of life provides information on all 100,000 species and ecosystems that we track.

Features

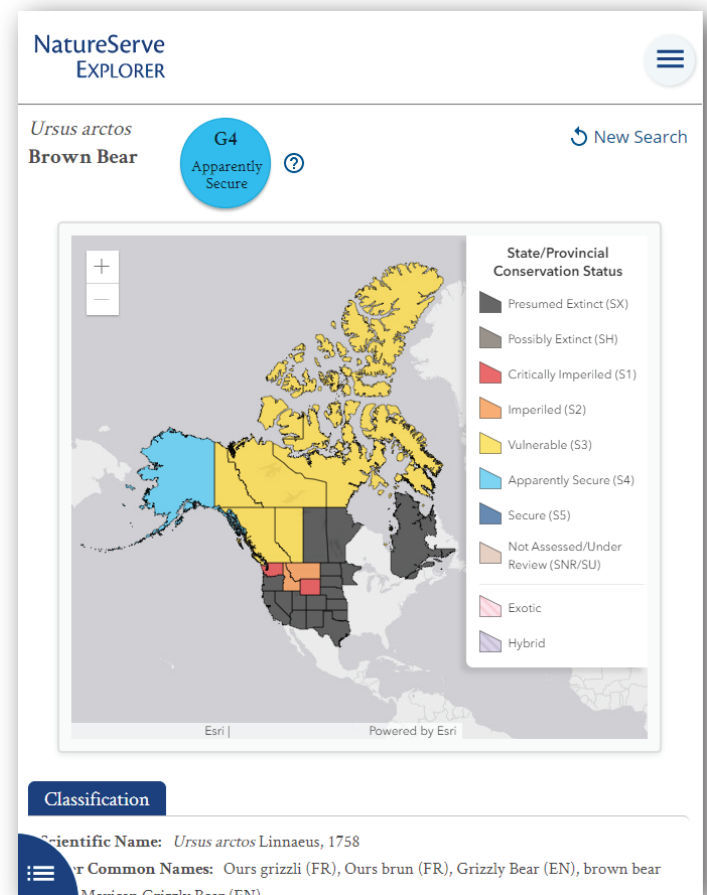

- Comprehensive data on 100,000 species and ecosystems in the Americas
- A queriable database that can be used to easily find scientific and common names, conservation status, and distribution maps
- The ability to export detailed reports based on customizable search criteria and filters
- A link to the NatureServe network's biodiversity database, serving the most up-to-date and scientifically defensible data
- Subscription to Explorer Pro grants access to high-resolution, downloadable datasets and maps for science-based conservation decision-making

Visit www.Explorer.NatureServe.org to start exploring the data now and ask us about becoming a pro member!

Detailed information about life history, taxonomy, management, conservation status, photos, and distribution maps—all at your fingertips!

Why NatureServe Data?

- 40+ years of data curated by a network of experts across the Americas
- Data collected using a standardized methodology means our data can be integrated across political boundaries

"The network's database on species and ecosystems is widely viewed as the most complete and detailed in the nation, and is the country's leading source of biological information for conservation planners, government agencies, and land managers."

— William K. Stevens, The New York Times
